
LZTR2 Antibody

Subcategory: Rabbit Polyclonal Antibody

Cat. No.: 254228

Unit: 0.1 mg

Description:

LZTR2, also known as RGPR-p117, is a member of the BTB-kelch superfamily and was initially described as a nuclear factor I (NFI) binding protein and transcriptional regulator of the regucalcin gene. LZTR2 is cytoplasmically localized but is thought to translocate to the nucleus, a process mediated by protein kinase C signaling following hormonal stimulation. Recent evidence has suggested that there is a strong correlation of single nucleotide polymorphisms of LZTR2 with obesity in the Japanese population similar to that seen with the TMEM18 gene and the GNPDA2, BDNF, FAIM2, and MC4R genes with obesity in Caucasian populations, suggesting LZTR2 may play a role in metabolism and obesity risk.

Isotype: Rabbit Ig

Applications: E, WB, IHC

Species Reactivity: H, M, R

Format: Each vial contains 0.1 ml IgG in PBS pH 7.4 with 0.02% sodium azide. Antibody was purified by immunogen affinity chromatography.

Alternate Names: LZTR2; Leucine zipper-like transcription regulator 2; SEC16B; RGPR; RGPR-p117

Accession No.: NP_149118

Antigen: KLH-conjugated synthetic peptide encompassing a sequence within human LZTR2.

Application Notes: E: 1:500-1:1,000; WB: 1:100-1:500; IHC: 1:00-1:500

Storage: Store at -20°C. Minimize freeze-thaw cycles.

Product is guaranteed one year from the date of shipment.

For research use only, not for diagnostic or therapeutic procedures.
