
Presenilin-1 (N-term) Antibody

Subcategory: Rabbit Polyclonal Antibody

Cat. No.: 250837

Unit: 0.1 mg

Description:

Presenilin-1 (PSEN1) is the catalytic subunit of the gamma-secretase complex, an endoprotease complex that catalyzes the intramembrane cleavage of integral proteins. Alzheimer's disease (AD) patients with an inherited form of the disease carry mutations in the presenilin proteins (PSEN1 and PSEN2) or the amyloid precursor protein (APP). These disease-linked mutations result in increased production of the longer form of amyloid-beta (main component of amyloid deposits found in AD brains). Presenilins are postulated to regulate APP processing through their effects on gamma-secretase, an enzyme that cleaves APP. Presenilins are also involved in the cleavage of the Notch receptor, either by regulating gamma-secretase activity or by direct proteolytic activity. Three alternative splice variants of PSEN1 have been identified. Defects in PSEN1 are a cause of familial early-onset Alzheimer disease type 3, the most severe form of the disease.

Isotype: Rabbit Ig

Applications: E, WB, IHC

Species Reactivity: H, M, R

Format: Each vial contains 0.1 mg IgG in 0.1 ml (1 mg/ml) of PBS pH7.4 with 0.09% sodium azide. Antibody was purified by Protein-G affinity chromatography.

Alternate Names: Presenilin-1; Protein S182; Presenilin-1 NTF subunit; Presenilin CTF subunit; PSEN1; AD3; PS1; PSNL1

Accession No.: P49768

Antigen: KLH-conjugated synthetic peptide encompassing a sequence within the N-term region of human PSEN1.

Application Notes: E: 1:500-1:1,000; WB: 1:200-1:500; IHC: 1:200-1:500

Storage: Store at -20°C. Minimize freeze-thaw cycles.

Product is guaranteed one year from the date of shipment.

For research use only, not for diagnostic or therapeutic procedures.
