

Mouse Adiponectin / Acrp30 / ADIPOQ Protein (His Tag)

Catalog Number: 50636-M08H

Sino Biological Inc.

Biological Solution Specialist

General Information

Gene Name Synonym:

Adipoq, APN, Acdc, Acrp30, GBP28, adipo, apM1

Protein Construction:

A DNA sequence encoding the mouse ADIPOQ (NP_033735.3) (Met 1-Asn 247) was expressed, with a C-terminal polyhistidine tag.

Source: Mouse

Expression Host: Human Cells

QC Testing

Purity: > 95 % as determined by SDS-PAGE

Endotoxin:

< 1.0 EU per µg of the protein as determined by the LAL method

Stability:

Samples are stable for up to twelve months from date of receipt at -70 °C

Predicted N terminal: Glu 18

Molecular Mass:

The secreted recombinant mouse ADIPOQ comprises 241 amino acids and has a calculated molecular mass of 26.4 kDa. As a result of glycosylation, the recombinant protein migrates as an approximately 30 kDa band in SDS-PAGE under reducing conditions.

Formulation:

Lyophilized from sterile PBS, pH 7.4

Normally 5 % - 8 % trehalose and mannitol are added as protectants before lyophilization. Specific concentrations are included in the hardcopy of COA. Please contact us for any concerns or special requirements.

Usage Guide

Storage:

Store it under sterile conditions at -20°C to -80°C upon receiving. Recommend to aliquot the protein into smaller quantities for optimal storage.

Avoid repeated freeze-thaw cycles.

SDS-PAGE:

Reconstitution:

Detailed reconstitution instructions are sent along with the products.

Protein Description

Adiponectin (ADIPOQ), also known as Adipocyte, C1q and collagen domain-containing protein, 30 kDa adipocyte complement-related protein, adipocyte complement-related 30 kDa protein, adipose most abundant gene transcript 1 protein, gelatin-binding protein, ADIPOQ and ACDC, is a secreted protein which contains one C1q domain and one collagen-like domain. Adiponectin/Acrp30/ADIPOQ is an important adipokine involved in the control of fat metabolism and insulin sensitivity, with direct anti-diabetic, anti-atherogenic and anti-inflammatory activities. Adiponectin/Acrp30/ADIPOQ stimulates AMPK phosphorylation and activation in the liver and the skeletal muscle, enhancing glucose utilization and fatty-acid combustion. Adiponectin/Acrp30/ADIPOQ antagonizes TNF-α by negatively regulating its expression in various tissues such as liver and macrophages, and also by counteracting its effects. Adiponectin/Acrp30/ADIPOQ inhibits endothelial NF-κB signaling through a cAMP-dependent pathway. It may play a role in cell growth, angiogenesis and tissue remodeling by binding and sequestering various growth factors with distinct binding affinities, depending on the type of complex, LMW, MMW or HMW.
